

*Facts about your*  
**“SMART”**  
**POWER STRIP**  
*(with desktop sensor)*

Our offices are participating in the Office Equipment Efficiency Program to save energy, help the environment, and ease the strain on California's electric system.

- This “smart” power strip with desktop occupancy sensor makes it simple.
- It senses your presence, and after you leave the work area it turns off anything plugged into the outlets controlled by the sensor.
- When you return, everything comes back on automatically.

## *Some things to keep in mind:*

*one*

Your eight-plug Wattstopper Isole power strip provides two normal outlets and six “smart” outlets that are controlled by the occupancy sensor. Use the controlled outlets of the Wattstopper Isole power strip for lights, fans, heaters, radio, printers, and other appliances.

*two*

Don't plug your computer's CPU into the controlled outlets. Use the uncontrolled outlets for anything that needs to stay in operation when you step out.

*three*

You can plug your computer monitor into this strip, even if its ENERGY STAR® features have been enabled. (These features may already have been enabled as part of this program – make sure they are!) That way, your monitor can save energy while you are present but not using the computer.

*four*

Place the sensor so it can always “see” you when you are present. It works by sensing your body heat and the small movements you make in every type of work. Don’t place it where it will see people passing in the hallway or it will turn on when you’re not there.

*five*

You can adjust the time delay from 30 seconds to 30 minutes by turning the small dial in back of the sensor. Turning the dial half way between its maximum and minimum is a good place to start, giving about 15 minutes delay. More energy savings will result from a shorter delay, but with too short a period, you may find it switching off if you are very still for a few minutes.

*six*

For more information about setting up your smart power strip (Isole #3050) or about the occupancy sensing light switch available through this program (#WS 120/227), visit the Energy Solutions website at [www.energy-solution.com/off-equip](http://www.energy-solution.com/off-equip) or refer to The Wattstopper, Inc.’s product literature that came with your hardware.
